Plantivity

Web-based Collaboration

Distributed Teamwork

Distribute Task and Track Activities

A Web-based Collaboration Tool in use by BMW AG Munich - Germany

Plan Activities & Track Issues

Plantivity offers a competitive edge by facilitating distributed teamwork with task planning and issue tracking features.

Both project managers and team members, regardless of their location, benefit from a central database storing job-related task or issue descriptions in a structured way.

Traceability Included

Distributed teamwork is automatically in-line with possible auditing requirements. Once an issue or activity was entered in *Plantivity* each change is recorded on a per-user base.

Customizable Organizational Structure

Users are assigned to workgroups on demand. The organizational structure of task and activities within such workgroups are predefined by project managers. Team members are still able to classify tasks on a more detailed level.

Easy-to-Use Web-Interface

Only a web-browser is needed to work with *Plantivity*. No additional client-software or plug-ins is required.

Users may adjust the user interface to meet their personal requirements. Powerful search and reporting functionality assist daily work.

BMW AG

BMW Group and its suppliers work closely in the areas of research, development, production and marketing.

Team-members are usually spread over different BMW facilities and numerous 1st, 2nd and 3rd tier partners.

Distributed teamwork like this strongly increases communication requirements. Conventional methods (like email or spreadsheets) used for coordinating tasks in such a scenario prove ineffective very quickly.

Plantivity enhances communication by offering

- *guaranteed security and confidentiality*
- *structured information*
- *traceability*
- *and automatic archiving functionality*

Plantivity is available as central task-store integrated seamlessly into the B2B-portal of the BMW Group.

BMW employees as well as external partners take advantage of the application. All information is available via a web-browser. Suitable security measures ensure that information of unrelated workgroups is shielded from each other. Participating users benefit from the undiminished traceability features built into *Plantivity*.
